filter placed in the path of the multi-mode light source that simultaneously transmits fluorescence excitation light below 450 nm and an amount of reflectance light (e.g. red, green and/or blue) that is a fraction of the fluorescence excitation light in order for the intensities to roughly match each other on the low light sensor.

Applicant pointed out that the combination of Hayashi, Renault and Suzuki was incapable of disclosing this feature. This pointed can be readily seen by noted that the filter (112) of Hayashi is located in front of the mercury lamp (111), while the light path of the xenon lamp (118) does not go through the filter (112).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
